Diego Cué

Tech Lead, iOS & React Native Engineering

"Life is what happens to you while you're busy making other plans." John Lennon.

Education

2016 **B.S. in Applied Mathematics**, *at Mexico's Autonomous Institute of Technology.*

Experience

Professional

September 2023–today **Tech Lead for Mobile Applications**, *Televisa Univision*, Mexico City, Mexico.

2020–June 2023 **iOS Architect**, *aDomicil.io*, Mexico City, Mexico.

2018–June 2023 **Senior iOS Developer**, *Tr3sco*, Mexico City, Mexico.

2020–today **Senior Backend Developer (Node)**, *Freelance.*

2017–2019 **Junior Backend Developer (.NET)**, *Tr3sco.*

2015–2018 **Mid iOS Developer**, *Tr3sco.*

2012–2015 **Junior iOS Developer**, *Tr3sco.*

Languages

Spanish Native

English Native and scientific *CPE-Level C2*

Computer Skills

Languages	Typescript, Swift, Objective-C, C#	Databases	MySQL, MongoDB SQLite, Redis
Design	Figma, Sketch, Photoshop	Project managment	Jira, Linear, Microsoft Project
Version control	Git	Cloud computing	Cloudflare Dev. Platform, AWS, GCP
Automatization	Github Actions, Fastlane, Jenkins	APIs	REST, GraphQL

Certifications

December 2025 **Mobile Certification**, *Airship*, ID: o553vvdqkgss, https://verify.skilljar.com/c/o553vvdqkgss.

January 2025 **TypeScript Pro Essentials Workshop**, *TotalTypeScript*, ID: 818eb490-ad05-465d-9565-429b010eb61f, https://res.cloudinary.com/total-typescript/image/upload/v1735894325/certificate/818eb490-ad05-465d-9565-429b010eb61f/typescript-pro-essentials.png.

November 2023 **Graph Developer Associate**, *Apollo*, ID: bdc238c6-efeb-4d00-b8fe-3116ce48a05a, https://www.apollographql.com/tutorials/certifications/bdc238c6-efeb-4d00-b8fe-3116ce48a05a.

October 2022 **Version Control**, *Meta*, ID: YZPF72Q5S2X7, https://coursera.org/verify/YZPF72Q5S2X7.

September 2022 **Introduction to iOS Mobile Development**, *Meta*, ID: QYLESCQM7V2Y, https://coursera.org/verify/QYLESCQM7V2Y.

May 2015 **Certificate of Proficiency in English (Level C2)**, *University of Cambridge*, Credential ID: 155MX0058003.

April 2015 **IB Diploma**, *International Baccaleureate Organization*, Credential ID: D0005730097dly939, .

November 2012 **iOS Development**, *Activ Adobe Authorized Training Center*.

Projects

2025-today **Univision Noticias**, *News & Entertainment mobile app*, Tech Lead, Lead iOS Developer & Lead React Native Developer, https://www.univision.com/noticias.

For this project I was in charge of handling the migration & revamp for Univision's Noticias app in the company's shared private/white label monorepo. This project continues on the foundations that TUDN set, UI library and shared libraries were reused and adapted as much as possible while shipping a new and improved version with optimized functionality prioritizing user content consumption and business KPIs. Part of my day to day was used in grooming & planning the architectural features that needed to be migrated as well as design the new features that needed to be developed from scratch. The project had the following characteristics:

- Usage of latest toolchain suite using biome, oxlint, oxfmt, turborepo, GraphQL, Expo with Expo Modules and Native Views
- Integrations with company sensitive APIs and SDK like IBM's Weather Company, Fastly VCL custom source code & aggressive caching at a CDN layer using Akamai
- Compliant implementation of PII data using OneTrust CMP, guaranteeing multiple compliance for different state laws across the digital product

2023-today **TUDN**, *Sport & Entertainment mobile app*, Tech Lead, Lead iOS Developer & Lead React Native Developer, `https://tudn.com/`.

For this project I was in charge of handling the migration for TUDN's new app in the company's new stack. This project was handled via monorepo setup with shared components, utilities and architecture with the web teams. I lead a team of 5+ engineers in doing the app from scratch by using the latest technologies. Part of my day to day was used in planning features with design, product and QA teams in order to reach the goals and dates for the migration. The project had some of the following characteristics:

- Latest tooling suite using oxlint, turborepo, GraphQL, ReactNative with Expo dependencies and Native Modules
- Integrations with analytics tools like kochava, appsflyer, google analytics and statsig
- Integrations with diverse ads functionality. Handled different ads specs for display and video ads
- Custom player implementations using JWPlayer and Akta player by using complex content syndication through CDNs

2018-2023 **aDomicil.io**, *Private/White label - Food delivery product SaaS*, Mobile Architect, Product & Project Manager, `https://adomicil.io/`.

In this project I was in charge of developing, architecturing and engineering the mobile Apps of aDomicil.io, which is a product that focuses on handling the delivery channel of restaurants primarily in Mexico City. I was also in charge of coordinating the project development with cross functional teams. Part of my role as engineer and product/project manager included in designing the optimal interfaces, and data transfer for the project needs and passing the requirements to technological teams. This project had modules and integrations with third party APIs like:

- Online Payments.- I integrated the Online Payment processors OpenPay, Stripe, EVO Payments and Mercadopago so that the users could tokenize their credit/debit cards. I was also in charge of developing the library to implement a new set of methods that OpenPay had not developed for iOS API.
- GeoCoding.- Input of user's address and location so that the user can order online.
- Loyalty Programmes.- I implemented diverse Loyalty/reward programmes so that the user could redeem benefits after ordering.

2019 **Daimler/Mercedes Benz**, *Employee car maintenance and vehicle ordering platform*, Senior iOS Developer, `https://www.daimler.com.mx/view/index`.

In this project I developed the iOS Application for Daimler/Mercedes Benz which helped employees through out the company manage their car ownership and leasing. This tedious process was done manually and without technology before we developed the technological solution. By doing this digitalization and optimization of their processes' we helped them save valuable time through out the whole chain of operation of this tasks. This project gave visibility and traceability through out the whole organization which helped in internal and external auditing. The project had modules like:

- Security and IAM.- The iOS app had to implement the Local Authentication/Biometric Authentication libraries so that the user had to use it's biometric identification to use the app
- Document Handling.- The application included the Documents, Drive and file management functionalities. The user could upload invoices, bills and evidences to help with the chain and management of their vehicles.
- Mobile Iron Security.- The application was subject to security auditing that we had to pass. The app was modified and changed so that it achieved the hightest security standards.

2019 **Arabela Porteo**, *Product delivery & debt collection app*, Web service design, database architecture & project management, `https://www.arabela.com/`.

In this project we only developed the Android app, the backend and server side functionality was handled by the company that hired us. I designed the web services -Input, Output- which the app was going to use, I also designed the SQLite architecture for the offline functionality. Through out the project I was in charge of managing the project using tools to efficiently solve problems that did arise in the process.

2019 **Teikit and Lucky Sushi**, *Food Delivery App*, iOS Development & Project management, `https://www.teikit.mx`.

In this project I developed the iOS app. After carefully designing the solution based on the clients requirements I developed modules like:

- Promotions.- NxM, Coupons and Loyalty programme.
- GeoCoding.- Input of user's address and location
- Tracking.- Notify the user on the status of his delivery

2018 **Ventanas al paraiso/Rosewood's The residences Homeowner**, *Hotel reservation and management*, iOS Development, `https://apps.apple.com/mx/app/the-residences-homeowner/id1345738068`.

I developed the Apple applications (iPhone and iPad) for Rosewood Hotels, the developed app served the purpose of helping the homeowers, hotel management, and staff in there day to day tasks by digitalizing the whole experience of reserving vacations, requesting services for there homes/rooms and managing the payment of maintenance fees. The modules and functionalities that this app offers are:

- Calendar.- The user has complete control of his reservations and availability times in the hotel room and/or properties.
- Digital Payments.- The user can choose to pay his programmed charges to a credit card as well as instantly pay it's fees right in the app.
- Real time chat and notification.- The hotel management, the staff, the owners and the guests can be in constant communication with real time chat services and notifications through out the app.

2018 **Phillip Morris International's Real time Inventory Tracking**, *Object Detection through Neural Networks Solution*, Python Development.

We designed the solution to a problem that PMI had in tracking inventory with the retailers. We proposed a real time tracker using Raspberry Pi and Neural Networks to solve this problem. I developed the Convolutional Neural Network to recognize the different SKUs in the picture. The solution was two fold. First, we found the areas of interest with Fast-RCNN. Second, after founding a bounding box with a certain level of confidence we ran a second CNN with the SKUs of the catalogue. We also showed PMI real time analytics like share of shelf, most sold SKUs, etc.

2017 **Diphsa O2**, *Analytics app*, iOS Development, `https://www.diphsa.com/`.

In this project we installed sensors in different oxygen machines through out an oxygen plant. After getting the data of the machines in real time, I developed the iOS app which gave the user the ability to see the analytics of the oxygen plant, the user could, as well, visualize in real time the problems that arise in real time.

2017 **Femsa RM and Femsa CI**, *News and media relationships and internal communication platform*, iOS Development, `https://www.femsa.com/es/`.

I was involved in developing modules and fucntionalities of Femsa's Platforms. Since Femsa is a gigantic company, we developed two platforms for handling communications.

- Femsa RM ("Relación con Medios").- A platform dedicated in handling communication with news and media channels regarding Femsas news and development.
- Femsa CI ("Comunicación Interna").- A secondary platform that supported internal communication taking into account the hierarchichal structure within the company. The users could communicate internally with different functionalities and modules talking into account the hierarchichal structure of the area where they worked.

2016 **Phillip Morris International's Ruta de campeones and Vencedores**, *Digital Loyalty and Rewards Programme*, iOS Development.

I was in charge of developing PMI's Loyalty Programmes for it's Sellers. PMI had a programme with the convenience stores through out Mexico, if the sellers reached certain metrics and KPIs they would unlock rewards and business opportunities with PMI. Some of the funtionalities that the app included were:

- QR Code Scanning and Camera.- The app included scanning of QRcodes, Barcodes and evidence handling. The user had to input data, upload evidence in multipart format and scan information on the go.
- Offline handling.- The app had to work when the user was offline. Taking into account that the app users could be on the road for hours at a time, at difficult network conditions, the app handled being offline by saving all the data locally until the user had connection and uploaded it.

2016 **Confidenza**, *Collective economies app*, iOS Development, .NET Development, `http://web.confidenza.com.mx/`.

In this project, at first, I developed the iOS app for booking the services of nurses and orderlies for at home care. Inside the iOS app you can book a nurse with specific skills for your specific need. Later, I was in charge of maintaining the backend as well, if a server-side change was needed, I developed it in ASP .NET.

2015 **Radio Fórmula**, *News, Editorial and Publishing*, iOS Development, `https://www.radioformula.com.mx/temas/app-15254.html`.

In this app I helped with developing specific modules that would connect with the work of my team members. I was in charge of developing a strategic module regarding multimedia management so that the user would have a smooth experience when navigating the app. The module that I developed was regarding the functionality of video consumption. The user could navigate the app while watching an in picture video in the UI of the app.

Extra curricular

- Composed, recorded and published an album with the band Trípoli, album available in streaming platforms. `https://open.spotify.com/artist/0UjjvlTE9gzv77bov1U0Ut`
- Recorded and published an album for Jordy Ulloa, album available in streaming platforms. `https://open.spotify.com/album/2KGPH79cYs69BldZr6DnwS?si=LaJFV1MATVe7SbkXAU9b6A`
- Certified by Centro de Desarrollo Musical in Luthiering & adjustment of stringed instrumets
